PROTECTION FIRST CLASS

FROM, THE BERKEBILE OIL COMPANY

PROTECTION FIRST CLASS RETAIL DISPLAY

- COUNTER TOP DISPLAY
- DISPLAYS 6 AEROSOL CANS & LITERATURE
- DISPLAYS SALT FOG TESTING RESULTS WITH REAL METAL SAMPLES
- GREAT FOR PARTS COUNTERS

Developed after months of research and testing, Protection First Class is a unique lanolin based rust preventative, lubricant and penetrant. It's superior formula is the best way to protect your investment and prevent rust on any metal.

Protection First Class utilizes a superior lanolin-based formula which was tested against the five top selling competitors' products.

All products were sprayed on uncoated steel test panels and suspended in a 5% salt fog cabinet. Products were tested until 50% of their surface area was corroded. Of the 5 products, 1 failed at 24 hours, 1 failed at 48 hours, 2 failed at 72 hours, and 1 failed at 96 hours. **Protection First Class, however, lasted for 9 weeks, and never actually failed. After 9 weeks (1,512 hours!!) the test was finally concluded, and the PFC sample was less than 10% corroded!**

SALT SPRAY TESTING RESULTS:

Results of 5% salt spray testing shown above. Each plate was exposed to a 5% salt fog for the time listed.
